LUNCHES, DINNER, ICE CREAM, DRINKS
An Ideal Place to Drive in on a Summer Evening.
Plenty of Parking Space.

BARTLING'S ICE HOUSE

1508 CENTRAL AVENUE
Ice sold in 5c, 10c, 20c and 40c Pieces.
In the Summer Time We Sell
ICE COLD WATERMELONS

This year we are giving more atten-
tion to our bulk garden seed depart-
ment, offering a complete line of
quality seed in bulk at reasonable
prices.

This department will have the per-
sonal supervision of Frank A. Bartling
and your orders will receive prompt
and careful attention.

We want to buy up to 2000 pounds of sweet
corn, the Stowell's Evergreen and the Country
Gentlemen varieties. Submit your samples and
we will quote you our bid.

The production of sorgo in Nebraska increased
from 247,000 bushels in 1936 to 1,837,000 bushels
in 1937. Last year the grain yielded 40 to 50
bushels per acre besides the immense yield of
forage. Plant a few acres of sorgo this year.

INOCULATION

For Alfalfa and Sweet Clovers, bushel size 50c each in
cans.

For Red and Alsike Clovers, bushel size 50c each in
cans. Also for Garden Peas and Beans and Soy
Beans.

SEED DISINFECTANTS

Ask for Literature.

Seed treatment for Wheat and Oats smut, Seed Corn,
Potatoes.

B. B. B. stands for Bartling's Best Brand. It is the
best grade of seeds we can offer. When you buy B. B.
B. seeds you buy the best available. You can buy
many lower priced seeds; for instance refer to prices
on alfalfa, the cheaper grades sell at as low as \$15.00
per bushel while the B. B. B. alfalfa seed is \$21.00 per
bushel.

WE WILL EXCHANGE OUR FARM AND GARDEN
SEEDS FOR YOUR GRAIN OR SEEDS.
YOUR PATRONAGE IS INVITED.

LOTS FOR SALE

If you are interested in a good investment or a city
home of your own, with all the advantages of city con-
veniences and better schooling for your children, now
is the time to see us or drop us a card.

These lots are of the best in Nebraska City. They
are within five blocks of the Court House, two blocks
of the Main street of town, only one block from a fine
modern school.

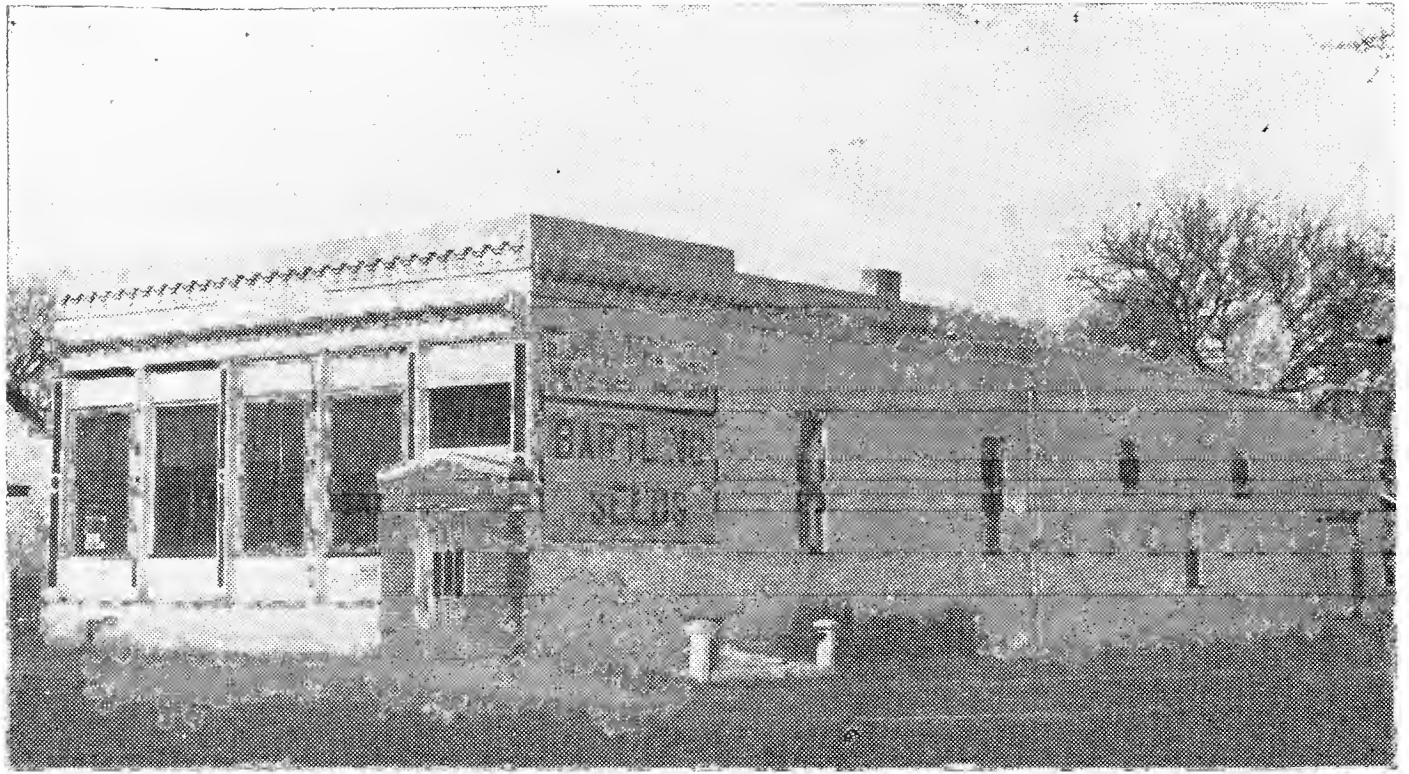

The "Cyclone" will sow
many acres per hour, any
amount per acre. Does
the work quickly and
SAVES LABOR!

Our place of business is located at 1500
Central Avenue, four blocks west of the Court
House in Nebraska City, Nebr. Our telephone
number is 37.

FEEDS

All feed prices subject to market changes. Lots 20
to 100 bushels offered at a less price.

Corn, Per Bu.	\$.60

Kaffir Fodder—Ask for Prices.	
Straw—Ask for Prices.	

Sixty-seven years is a long time, but it is a fact, Bartling has been in business that long. By trading with us you gain the benefit of an experience that is not easily secured from other sources.

We are buyers of Alfalfa, Red Clover, Timothy, and other farm seeds. Submit a sample and we will quote you our bid.

Let us clean and grade your seed and grain. Bring in your clovers and forage seeds and we will do a good job of recleaning, also, will grade seed corn. Our charges for doing the work are reasonable.

HYBRID CORN We know competition is keen and that everyone likes to meet the other man's price; however, we find no difficulty in selling our corn in competition with these cut prices as our corn is State Certified, treated, and carefully graded so as to make a No. 1 grade. We do not consider that a producer is wise to grow hybrid corn on a price basis. It is a high class bit of merchandise with its value almost entirely hidden from the buyer. Consequently great faith must be placed in the producer and his method of growing hybrid.

SEED CORN Our seed corn is grown within a few miles of Nebraska City. Is chosen from fields that make large yields and produce good quality corn. Each ear is hand sorted, tipped and examined. It is then shelled and graded. We stock the popular varieties: Iowa Silvermine, St. Charles Red Cob and the Reid's Yellow Dent. We also have the 90 day early kinds. \$2.00 per bushel.

Edward Bartling Seed Co.

NEBRASKA CITY, NEBRASKA

BROME GRASS

Brome Grass is an erect perennial with strong creeping root stocks and makes a thick, firm turf. It thrives well on dry, loose soil and appears to grow with equal vigor from Canada south into Tennessee, remaining green throughout the entire winter season in the latter State. Its strong perennial character and its unusual drouth resisting powers recommend it for general cultivation, particularly in the semi-arid regions of the west and northwest.

Like other grasses, it should be seeded early in the spring or late summer, but two months before killing frost so as to get a good start before winter comes on. Because the seed is relatively large some effort should be made to get it into the ground. Seed should be sown at the rate of $1\frac{1}{2}$ to 2 bushels to the acre if sown alone—where seeded in mixtures, in a proportionate amount depending upon the number of ingredients in the mixture. It is adapted to regions of light rainfall. Roots penetrate five feet.

TIMOTHY

Timothy has been for years the standard and most widely grown hay grass. So long as there are horses to be fed, Timothy will be indispensable. On account of the cheapness of the seed, and the ease and low cost of growing and harvesting it, Timothy is the most profitable grass wherever conditions permit its cultivation.

KENTUCKY BLUE GRASS

It is the most nutritious of American pasture grasses. Recent investigations have shown that much land formerly thought to be too valuable for pasture could be put with profit into Kentucky Blue Grass. The immature grass is richer than Alfalfa hay; the tital product of an acre of good Kentucky Blue Grass pasture contains two and a half to three times as much digestible protein as that contained in the product of equally good land devoted to the usual four-year grain and hay rotation.

BIENNIAL WHITE BLOSSOM SWEET CLOVER

This is the commonest type of Sweet Clover and the one which has come to the front so rapidly in recent years for forage, pasture, and soil improvement. It will grow in almost any climate and on almost any type of soil, thriving on land too poor for Alfalfa or Red Clover. It is a biennial, disappearing at the end of the second season unless allowed to go to seed and reseed itself. It fits well into the rotation scheme and may be sown with corn at the time of last cultivation or following a crop of winter grain. As hay or green forage it ranks with Alfalfa in feeding value.

ALFALFA

Alfalfa deserves to rank first among the legumes. It is the mainstay of the dairyman. It furnishes more green forage, more pasture and more dry hay per acre than any other known variety of hay or grass. It is relished by stock. For feeding it is worth more per pound of dry matter than any other forage. As a nitrogen gatherer it is equal to any of the clovers.
